```java
package Chapter06;

public class CircleTest {
    public static void main(String[] args) {

        Circle circle1 = new Circle();
        circle1.setRadius(3.6);
        circle1.setX(0.0);
        circle1.setY(1.5);

        System.out.println("반지름: " + circle1.getRadius());
        System.out.println("중심 좌표: " + "(" + circle1.getX() + "," +
  circle1.getY() + ")");
        System.out.printf("넓이: %.2f\n", circle1.getArea());

        Circle circle2 = new Circle();
        circle2.setRadius(-5.0);
        circle2.setX(1.0);
        circle2.setY(2.2);

        System.out.println("반지름: " + circle2.getRadius());
        System.out.println("중심 좌표: " + "(" + circle2.getX() + "," +
  circle2.getY() + ")");
        System.out.printf("넓이: %.2f\n", circle2.getArea());
    }
}
```
